27. The complement of a tree is called as a ----- :-> co-tree
28. The relation between link, element and node is----- :-> $l=e-n+1$
29. A ----- is any subset of elements of the graph. :-> subgraph
30. A connected subgraph containing all nodes of graphs but no closed path is called a ----- :-> tree
31. A matrix is said to be Skew-symmetric if ----- :-> $A = -A^t$
32. A matrix is said to be Skew-Hermitian if ----- :-> $A = -(A^*)^t$
33. The transpose of a ----- matrix is identical to the matrix itself, :-> Symmetric matrix
34. The geometrical interconnection of the elements of a network is called as a ----- :-> graph
35. In a tree network, the voltage across Fictitious branch is ----- :-> 0
36. Fictitious cut-sets are introduced in Augmented network in order that the number of cut-sets equals the ----- :-> elements
37. The Bus admittance matrix Y_{BUS} can be given by ----- :-> $A^t[y]A$
38. The Loop impedance matrix Z_{LOOP} is given by ----- :-> $C^t[z]C$
39. The dimension of Element-node matrix is ----- :-> $e \times n$
40. The rank of Bus incidence matrix A is ----- :-> $n-1=b$
41. Branch-path incidence matrix K is a ----- matrix :-> nonsingular square matrix
42. Basic cut-set incidence matrix B can be partitioned into ----- :-> U_b and B_1
43. In load flow analysis, the load connected at a bus is represented as ----- :-> Constant real and reactive drawn from the bus
44. To cause the transfer of Reactive power (Q) from one point to another point there should be ----- :-> difference in voltage
45. An electric circuit with 10 branches and 7 nodes will have ----- number of loop equations :-> 4
46. In load flow studies of a power system, the quantities specified at a voltage controlled bus are ----- :-> P and V
47. In augmented loop incidence matrix, the orientation of an open loop is the same as that for the associated ----- :-> branch
48. The number of branches required to form a tree is ----- :-> $n-1$
49. A connected network of $N > 2$ node has almost one branch directly connecting any pair of nodes. The graph of the network ----- :-> must have at least N branches for one or more closed paths to exist
50. If the number of branches in a network is B the number of nodes is Nm and the number of dependent loops is L, then the number of independent node equations will be ----- (S) :-> $N-1$
51. To reduce the weight of the diagonal element in Y bus matrix we connect ----- :-> shunt capacitor
52. The normal value of acceleration factor (α) in G-S method is ----- :-> 1.2 to 1.6
53. In load flow studies of a power system, the quantities specified at a Swing bus are ----- :-> V and Delta
54. A slack bus in load flow studies is the bus which has highest ----- capability :-> power generation
55. To cause the transfer of Active power (P) from one point to another point there should be ----- :-> difference in load angle
56. If the reactive power generation at generated bus violates the maximum and minimum limits then the bus is treated as ----- :-> load bus
57. In load flow studies the bus which has high Inertia ----- :-> slack bus
58. If the reference bus is changed in two load-flow runs with the same system data and power maintained for reference bus taken as specified P and Q in the latter run, ----- :-> the system losses will change but complex bus voltage remain unchanged
